

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

To Mr. H. Baker F. R. S. of extraordinary
Heat in Feb. and of the same Earthquake.

Dear Sir,

Read March 8. 1749 50. **T**HE Temperature of the Air was found to be warmer by my Thermometer (abroad) several Days of the last Month at 2^h p. m. than I had observed it to be some Days in June last, at the same Hour; but, on Thursday Feb. 22. at 2^h p. m. it stood at near 63; and soon after rose to 63 full; which is higher, as appears from my Register, than it was at the same Time of Day, 18 Days in the Month of June. And I find, by an Account sent me from Mr. Canton, of Spital-Square, that his Thermometer was at the same Degree at 2^h p. m. the same Day.

This perhaps may be thought not unworthy to be register'd in the meteorological Accounts in the *Phil. Transf.* but is submitted to the Judgment of the Royal Society, by

Your and their most obedient,

Testing, March 8.

1749-50.

humble Servant,

H. Miles.

P. S. I was this Morning, at 5^h 40' surpris'd with a violent Shock in my Study, which shook the Doors of my Book-Presses exceedingly: It was felt all over this Town and the next. I have not Time for further Particulars, nor am I able to say as yet, whether it was caused by the blowing up of a Powder-Mill, or by an Earthquake.
